KEPE Indices

April 2024 estimations

KEPE compiles and publishes two innovative and sophisticated indices on a monthly basis with the aim to regularly monitor the economic conjuncture.¹

KEPE Composite Leading Indicator

The KEPE Composite Leading Indicator (CLI) is constructed based on a dynamic factor model, using six selected monthly economic series assumed to have leading properties. It provides early evidence on the course of and any turns in Greek economic activity, ahead of the developments in major economic aggregates. According to the most recent observation for January 2024,² the CLI recorded an increase, following the marginal increase of the preceding period of reference, and remains at high levels for the total period of investigation. The respective development supports the evidence in favor of an interruption of the recent downward trend of the CLI and a transition to a rising path. As a result, it reflects an enhancement of expectations and assessments by agents involved in economic activity, offering leading indications for an intermediate improvement in future economic conditions. On that basis, any adverse impact due to the rise of geopolitical risks is not considered to be predominant. In order to acquire additional evidence, it becomes necessary to re-estimate the CLI. The inclusion of new data is expected to offer further information regarding the course of future domestic economic activity.

KEPE GRIV "Fear" Index

The KEPE GRIV implied volatility index, or the "Fear" index, reflects the uncertainty of the derivatives market participants regarding the expected short-term course of the Greek market and is calculated based on the FTSE/Athex Large Cap Index options prices. The KEPE GRIV index increased in April 2024, reaching 26.70% on 30/4/2024, from 22.40% on 28/3/2024 (See Figure 2). Moreover, the average daily value of the index increased, reaching 26.32% in April 2024, from 24.44% in March 2024. The index remained below its historical average level (since January 2004) for the Greek market, which stands at 32.23%. The evolution of the index indicates an increase in uncertainty for the expected short-term course of the Greek market compared to the end of the previous month, with fluctuations within the month.

Figure 2: The evolution of the KEPE GRIV index (daily estimations 2/1/2004-30/4/2024)

Note: There is no data for the period 29/6/2015-31/7/2015 due to the suspension of trading of all derivatives traded on the ATHEX Derivatives Market following the bank holiday.
